

## WVU Medicine Jackson General Hospital expands Infusion Therapy Services

July 16, 2025

RIPLEY, W.Va. (WV News) — WVU Medicine Jackson General Hospital is proud to announce the expansion of its Infusion Therapy Services, providing more accessible, local care for patients in need of regular infusion treatments.

In response to growing demand and a commitment to improving access to essential healthcare, the hospital has added additional trained staff, expanded operating hours, and now offers infusion therapy on more days of the week. These enhancements are designed to ensure that patients no longer need to travel long distances to receive their treatments.

“Expanding our infusion therapy services is a direct reflection of our mission to serve the health needs of our community,” said Candace Miller, CEO of Jackson General Hospital. “We understand how important it is for patients to receive high-quality care close to home, and we are proud to provide that option right here in Ripley.”

Infusion therapy includes treatments such as IV antibiotics, hydration, iron therapy, and other medications delivered directly into the bloodstream. These services are crucial for patients managing chronic illnesses, post-surgical needs, or conditions that require regular infusions.

If you require infusion therapy, be sure to speak with your healthcare provider about receiving your treatments at WVU Medicine Jackson General Hospital. Our experienced team is ready to serve you with compassion, professionalism, and convenience—right here in your own community.
